To register for this  
no cost workshop  
916.732.6738  
sdelbon@smud.org

Tor Allen and Hal Aronson of the Rachus Institute introduce curriculum from Solar Schoolhouse which will teach you to integrate the concepts of renewable energy into your existing curriculum while aligning to California science standards as well as correlating to other subjects. The workshop activities will focus on solar energy and teachers will design and build thermal and electric solar projects which can be immediately introduced in the classroom. In addition to the curriculum, teachers will receive solar materials as well as become eligible to check out classroom solar education kits.
